

Driver training

Is negative driver behaviour costing you time, money and your reputation? FleetCheck Driver Training covers all the following:

- ✓ Concentration, observation and anticipation of incidents.
- ✓ The impacts of increased speeds on injury rates, collision damage and vehicle wear.
- ✓ The system of vehicle control, including best fuel efficiency and environmental awareness.
- ✓ Specific solutions matched to the experience of the company and individual - for example, manoeuvring, reversing and parking accidents.
- ✓ The principles of skid avoidance and skid correction.
- ✓ Individual training for each driver, paying particular attention to speed limits, any specific problems they may have and preceding discussions.

Background

This in-vehicle Driver and Speed Awareness Training course is carried out via our national network of qualified expert trainers.

Courses are held on site in the vehicle the individual would use on company business. These sessions are not a test, so the trainer will concentrate on helping individuals to develop the visual and mental strategies required to improve risk perception and decision making processes. In-vehicle driver training is universally recognised as the single most effective way to reduce speeding convictions and driver related incidents.

Objectives

FleetCheck in-vehicle driver training is designed to achieve these main objectives:

- ✓ To develop greater overall awareness and risk perception skills that help improve the driver's understanding of speed limits, the relationship to collision involvement and the risk of personal injury or damage to the vehicle.
- ✓ To further examine specific areas of driving skill and address any areas of concern, both to the trainer and the participant(s).
